REYNARD

SUMMARY

Starting from the premise that Real World (RW) characteristics are reflected in VW behavior, the IARPA Reynard program sought to identify behavioral indicators in VWs and MMOGs that are related to the RW characteristics of the users. Performers in the Reynard program were expected to produce one or more VW behavioral indicators that serve to identify RW attributes of individuals or groups. Attributes of interest included the following: gender, approximate age, economic status, educational level, occupation, ideology or "world view," degree of influence, "digital native" vs "digital immigrant," approximate physical geographic location, native language, and culture.

BROAD AGENCY ANNOUNCEMENT (BAA)

LINK(S) TO BAA

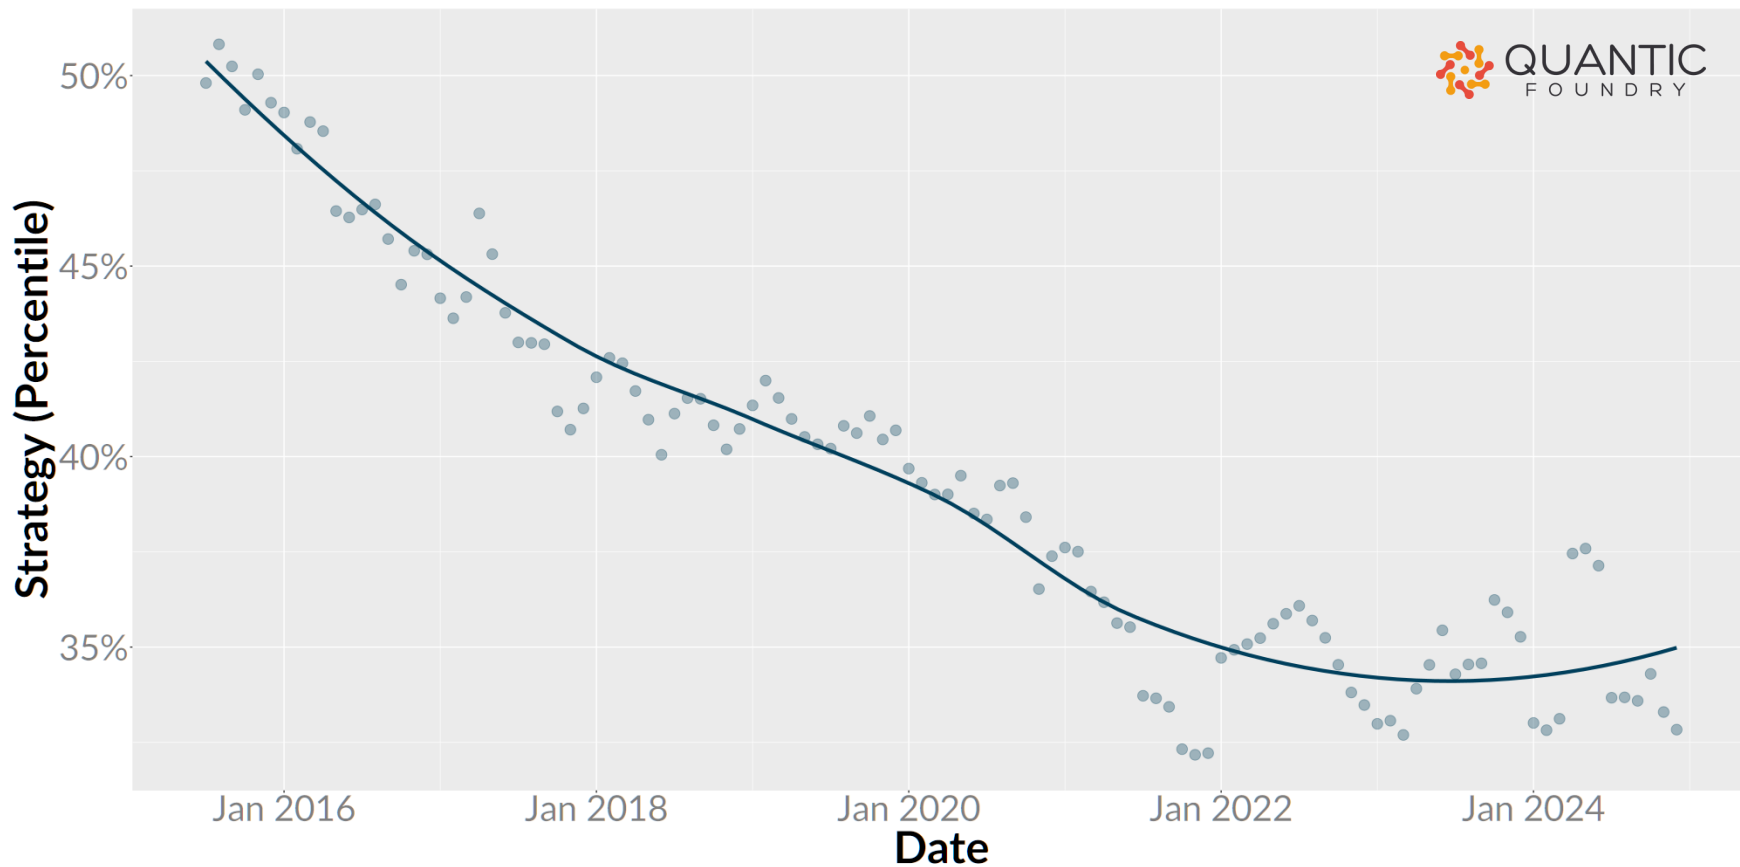

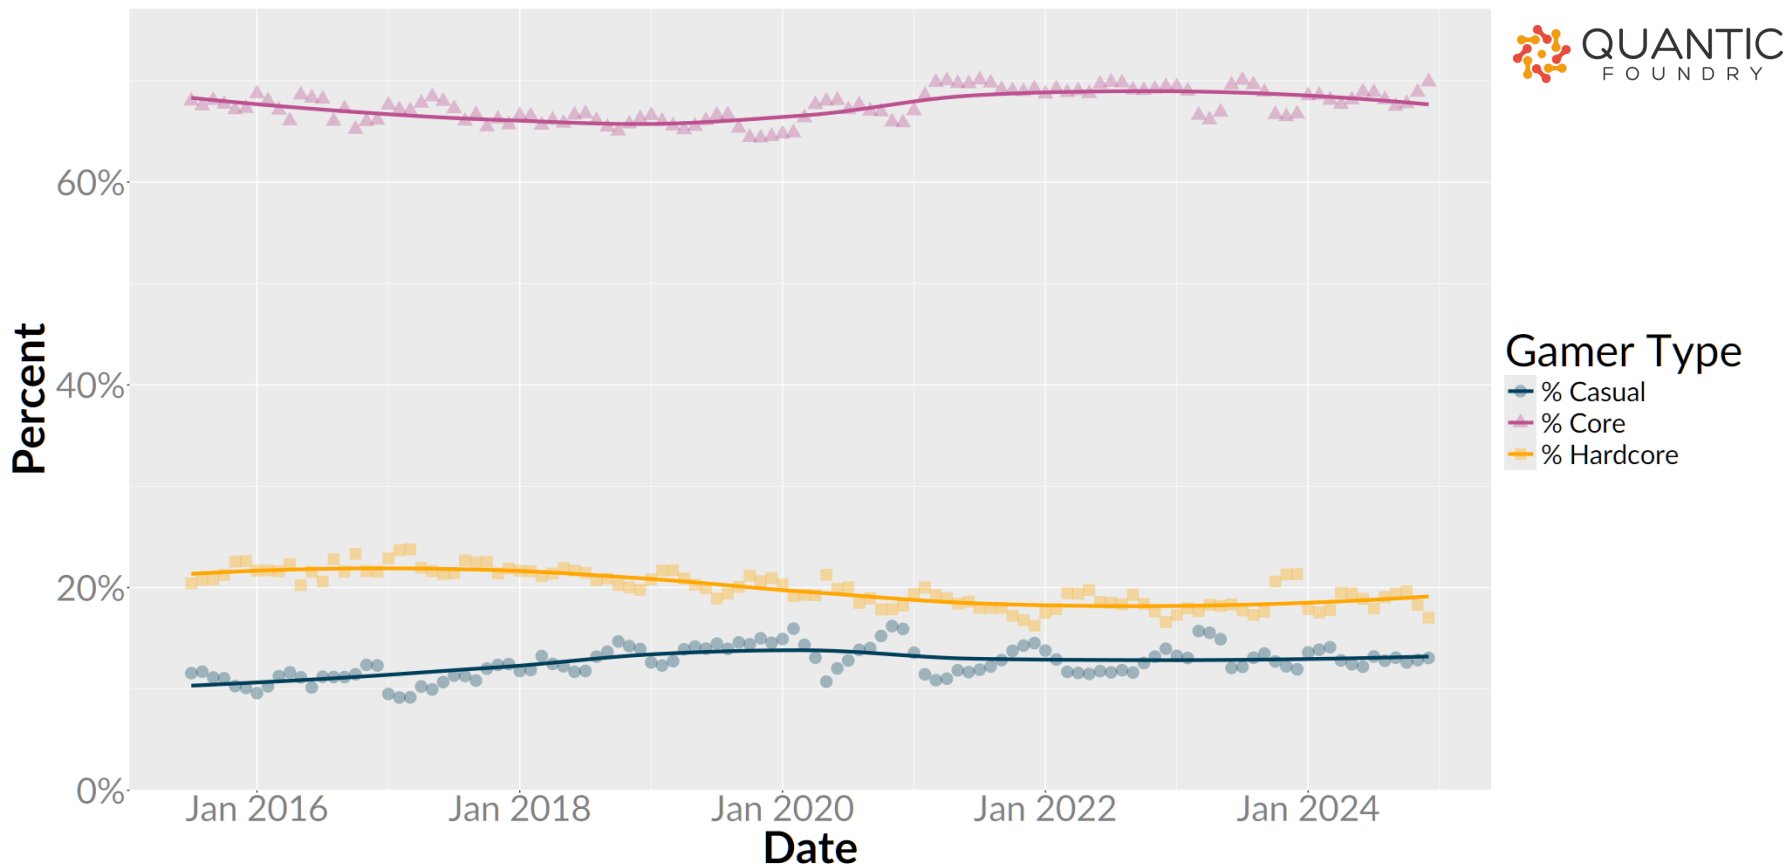

THE APPEAL OF STRATEGY HAS DECLINED SUBSTANTIALLY OVER THE PAST 10 YEARS

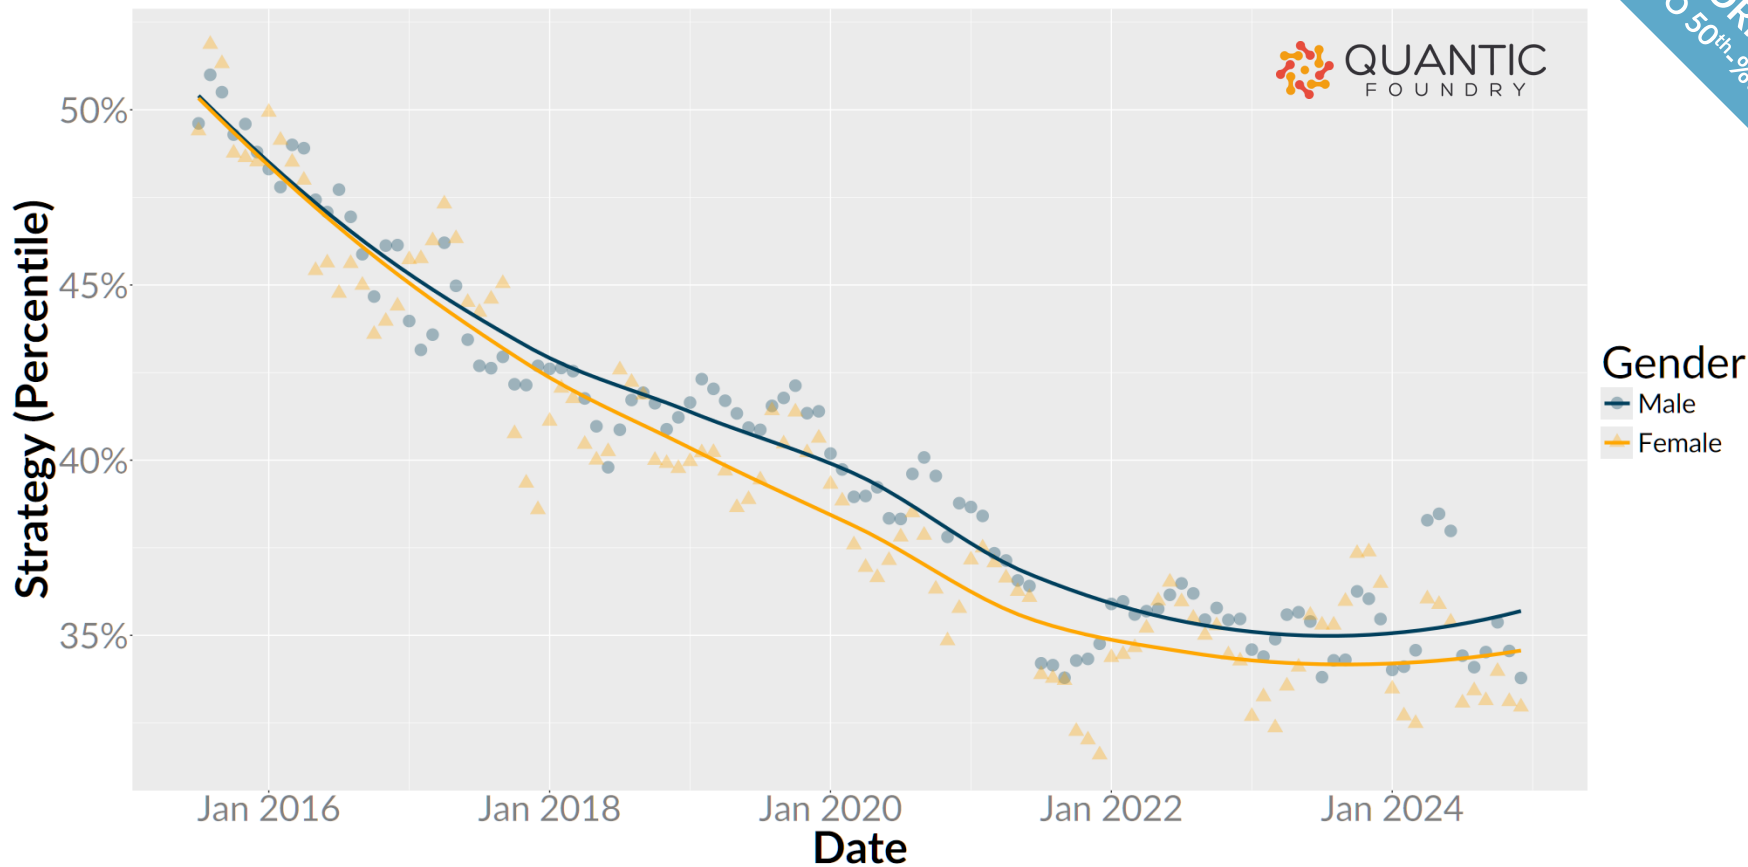

THE PROPORTION OF CASUAL/CORE/HARDCORE GAMERS IN OUR SAMPLE HAVE REMAINED RELATIVELY CONSTANT

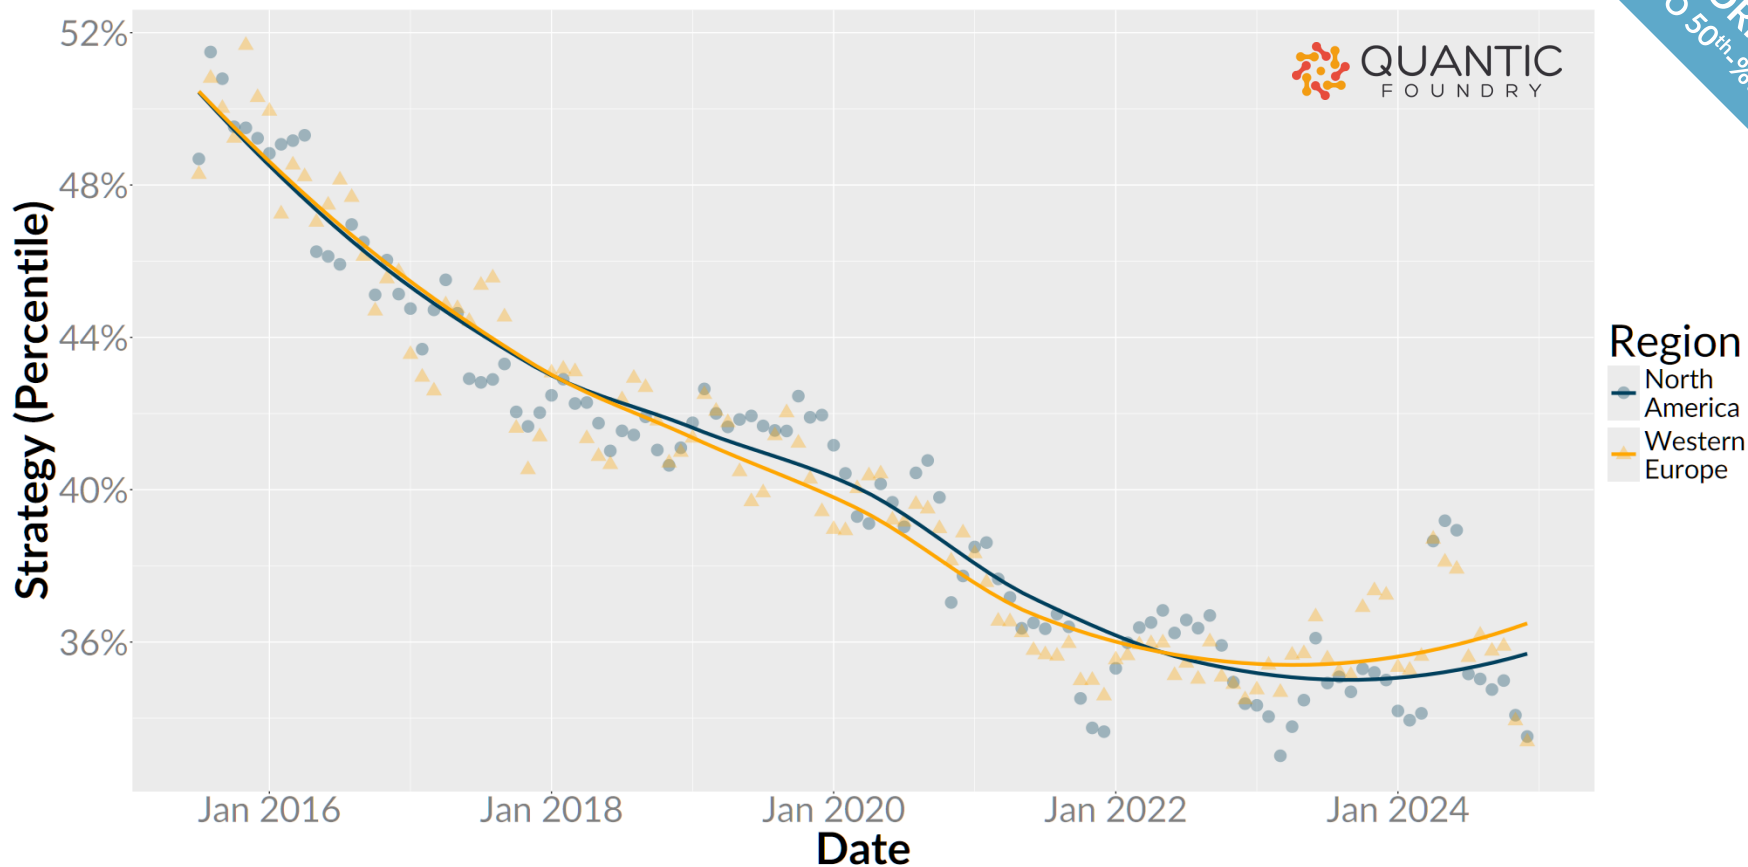

THE DECLINE IS IDENTICAL FOR BOTH MEN AND WOMEN

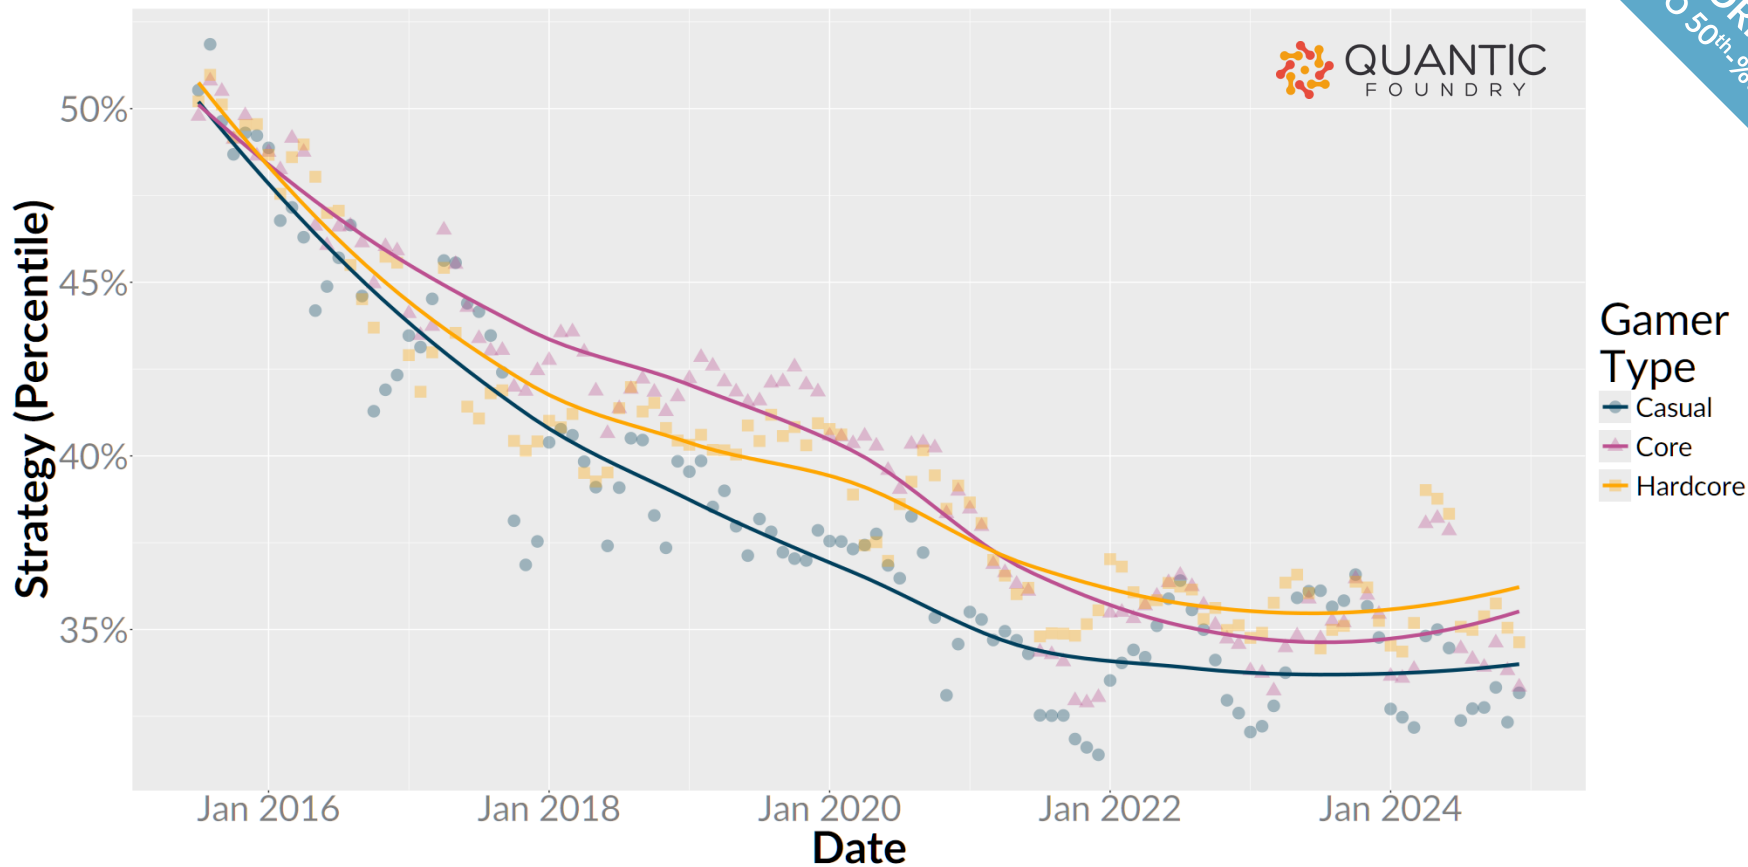

DATA SERIES ORIGINS
ANCHORED TO 50th-tile

THE DECLINE IS IDENTICAL FOR NORTH AMERICA & WESTERN EU

DATA SERIES ORIGINS
ANCHORED TO 50th-tile

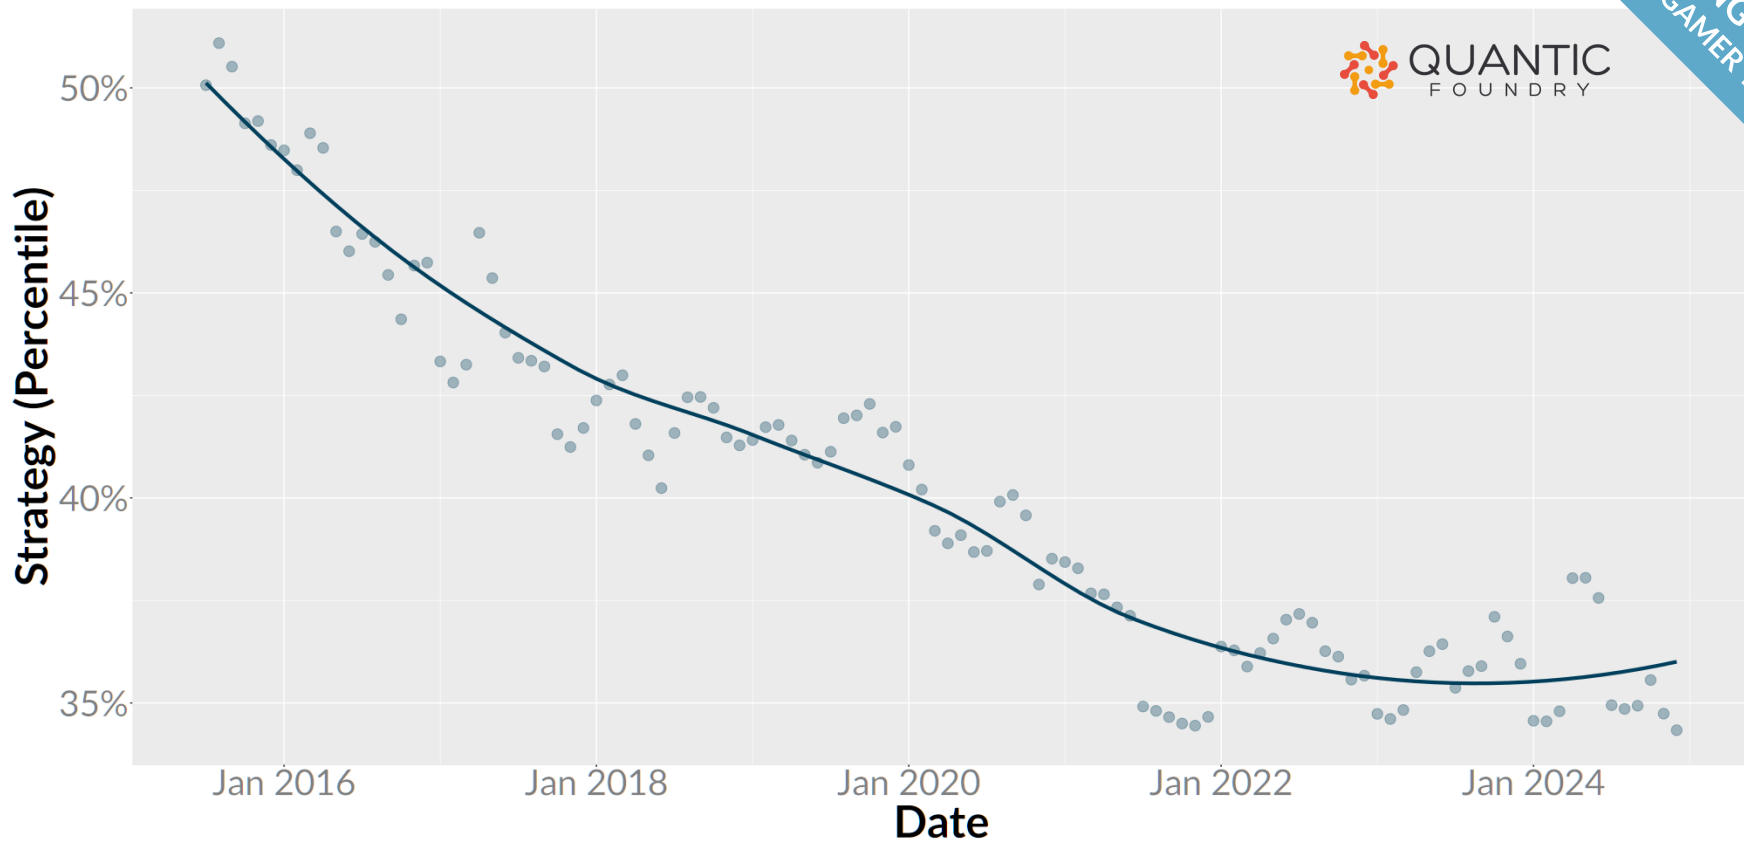

BUT WITHIN THESE GAMER TYPES, CASUAL GAMERS HAVE DECLINED A BIT MORE.

WE CAN CONTROL FOR THESE VARIABLES AND THE STRATEGY CHART WOULD LOOK THE SAME

CONTROLLING FOR
GENDER, AGE, GAMER TYPE

Data controlled for Gender, Age, and Casual/Core/Hardcore

With the ever-increasing psychological tricks of making games addicting profit generators, it makes sense.

Instant gratification, dopamine hits, skinner box mechanics, gambling loot boxes, FOMO, etc.

Yeah it's actually insane how prevalent this is almost without realising it. I remember watching a behind the scenes documentary and thinking games I play are not like this and man was I wrong. Things I wouldn't have ever thought about were only there to trigger dopamine. Most the games I played were not good and I wasn't having that much fun but I was hooked on the instant gratification I would get within minutes of booting up the game. I realised super slow games with lots of reading could no longer hold my attention for long.

Once I stopped playing them and fully shook them off I realised I never enjoyed them, they are not good games but I was just hooked on the feeling they gave me. After a long break I found myself able to enjoy much slower paced games and text heavy games that require a lot of strategic thinking and the like.

Love the data, and it sure does raise interesting questions. My first instinct was to go where you went—shorter attention spans, and the world is generally going to hell. I suspect that's at least part of it, but I wonder if there are other explanations, partly because "the world is going to hell" feels a little too self-satisfying to me.

Is it possible that strategy games are becoming less common, and so survey takers would reflect that not so much as a change in motivation but as an artifact of recall? Like "what have I been doing lately? Oh, I've been watching a lot of comedies this week, so I must like funny things in general." It could be that strategy was a more common element of games when they were relatively more niche, and with the rise of mainstream gaming, we see more non-strategy content.

Of course, that might reflect actual demand, and so the survey would still be spot on. It's a hypothesis, anyway, that reminds me of "the media don't tell us what to think, but they do tell us what to think about."

Related to your point, there's certainly the chicken-and-egg aspect of games in the market creating a normative framework of what "games are supposed to be" and how that might shape gamers' tastes over time. The more games emphasize graphics and the more gamers get used to that, then the less they expect to do strategic thinking in games. And then it gets harder and harder to tease out expectation from desire.

And also, the world is totally going to hell 😊

Strategy tends to be a very "core" motivation, so I would guess this decline is most likely due to the growth/diversification of the gaming audience, especially very action and social-oriented players (often more "casual" among engaged players)

[Amanda Lira Brandão](#) that was my thought, as well. We would need longitudinal analyses that focus on individual changes to conclude that people are losing interest in strategic games overall. With the proportion of citizens who play digital games growing over the years, it's possible that new audiences have been attracted to (non-strategic) games: ...more

GAMES CHANGED

PEOPLE CHANGED

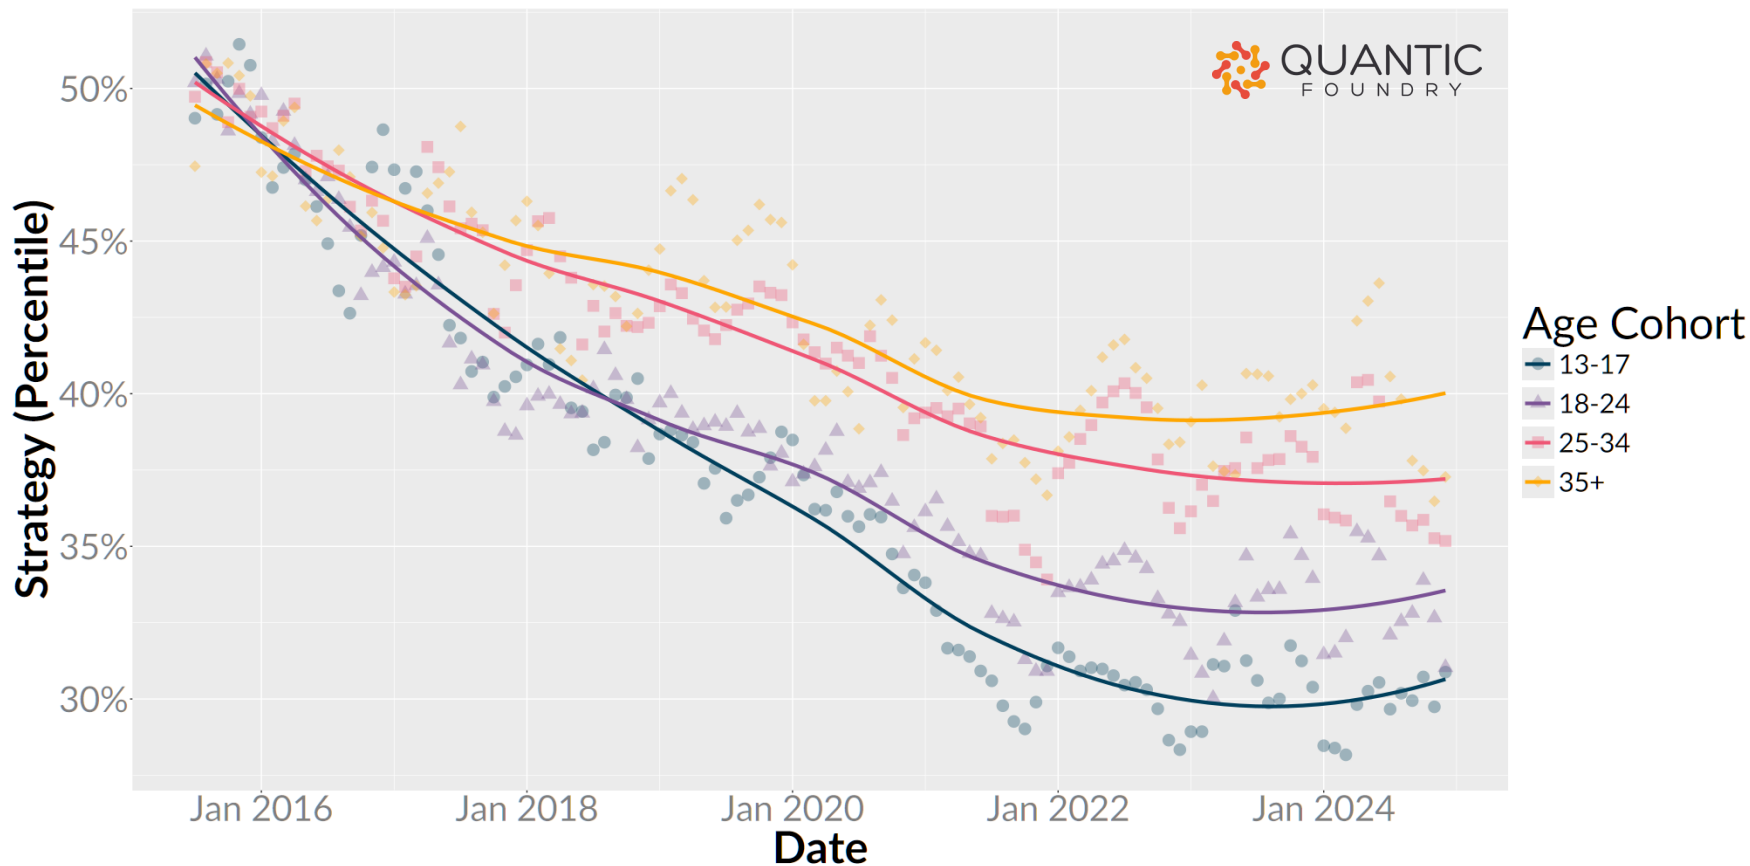

GAMERS CHANGED

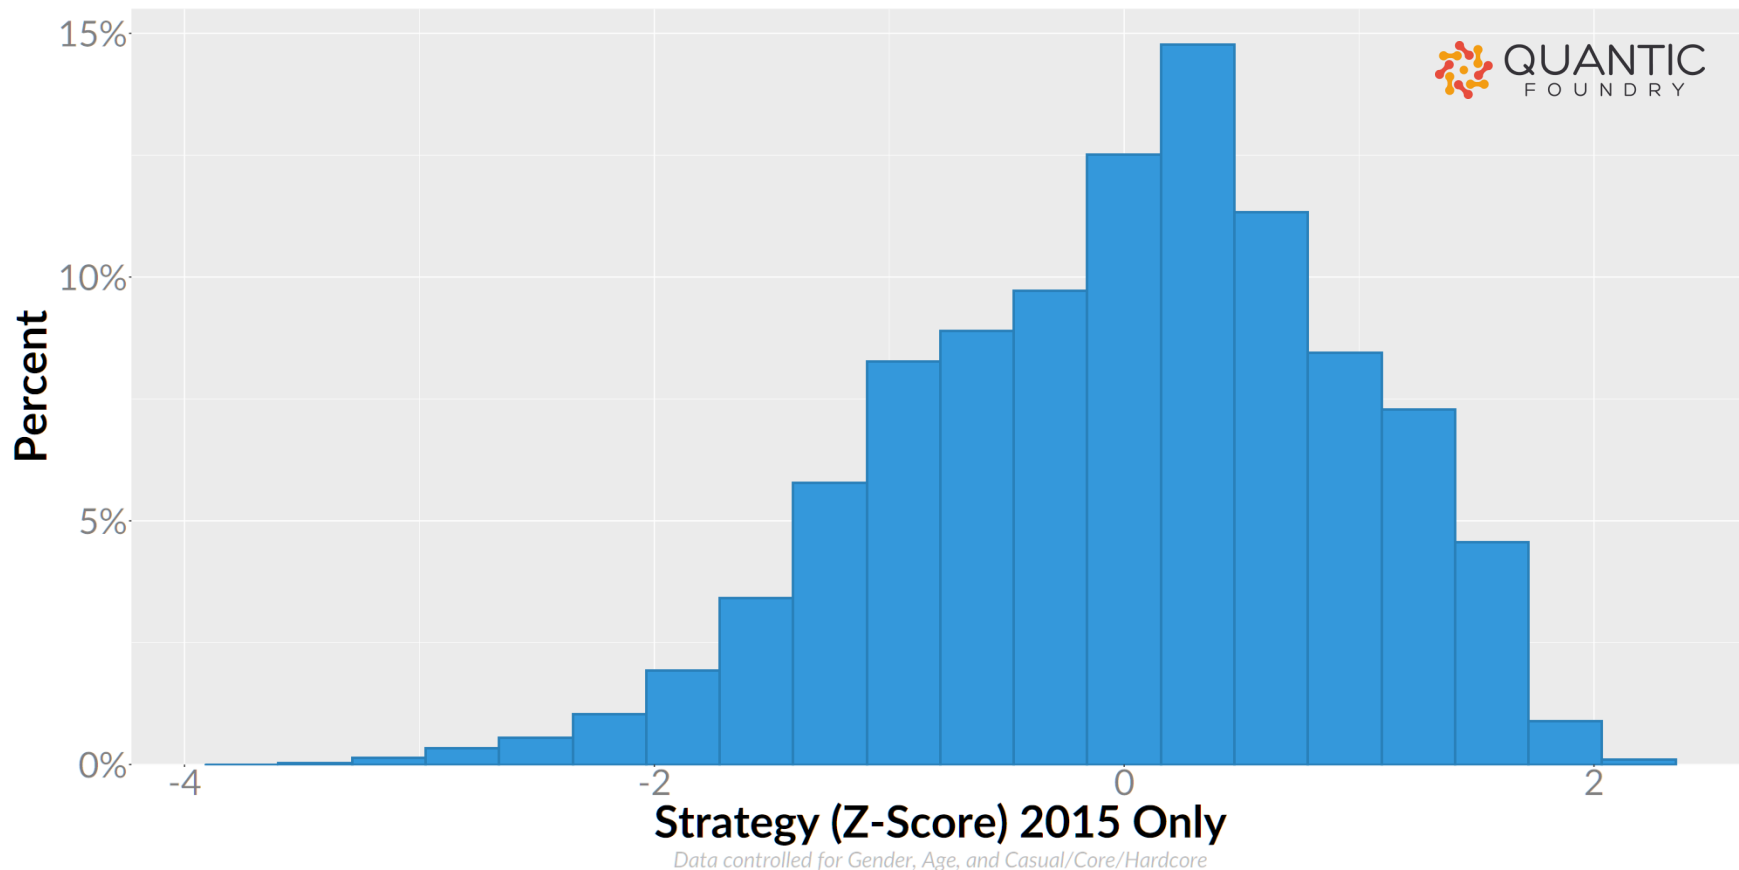

THE LARGEST COHORT DIFFERENCE IS IN AGE.

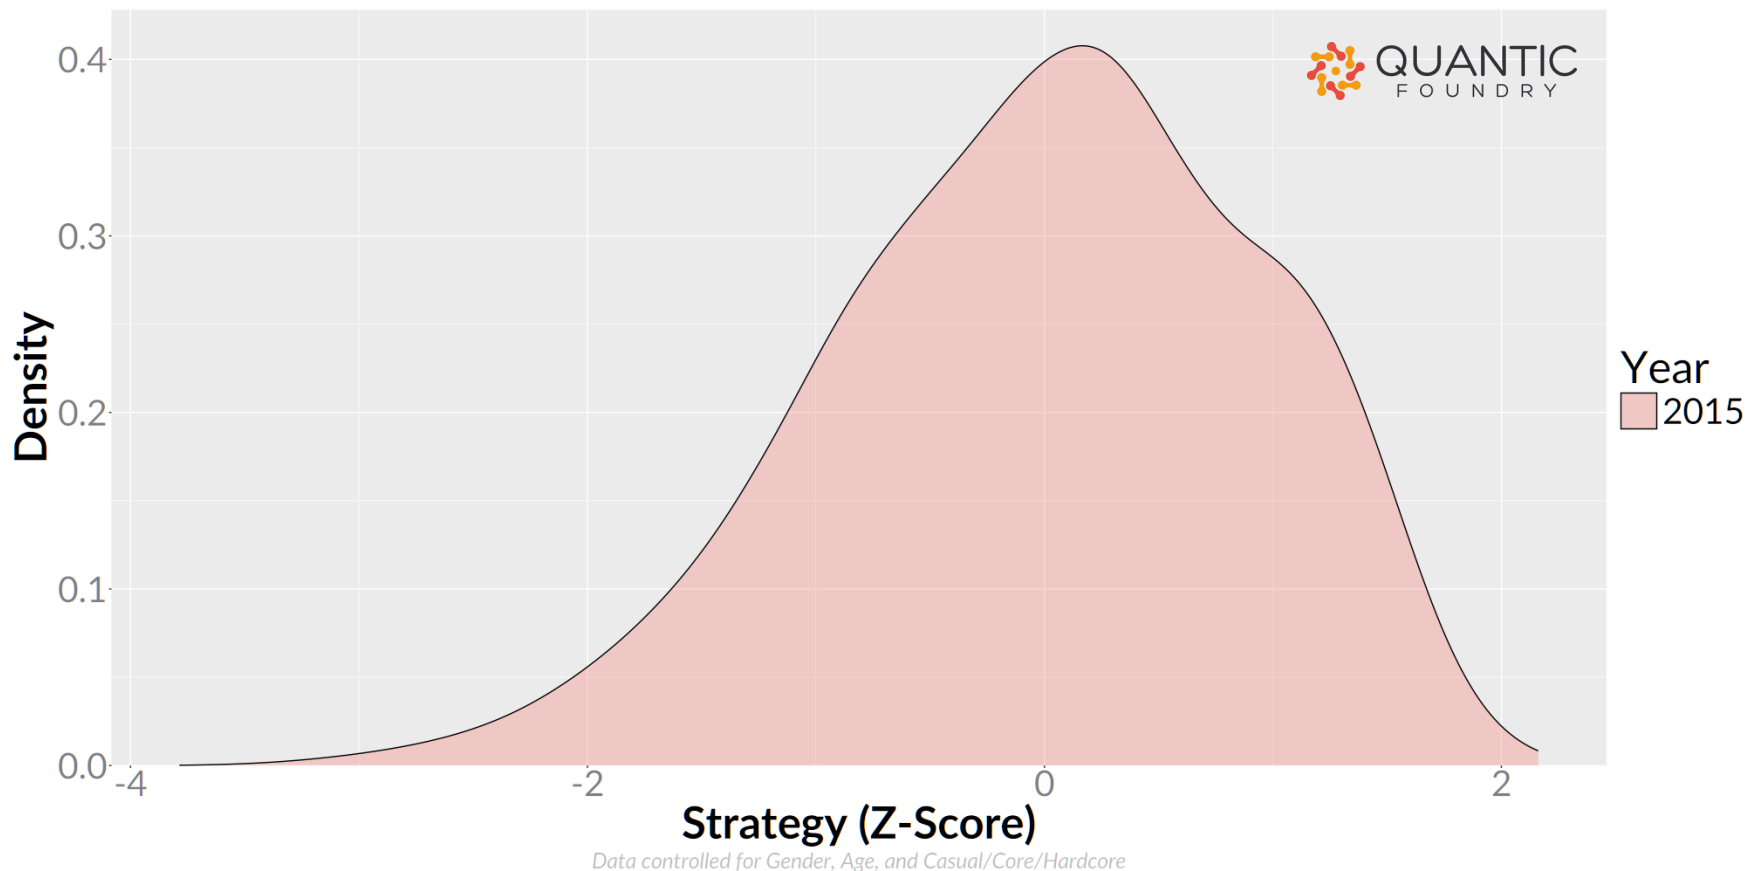

THE YOUNGER THE PLAYER, THE LARGER THE DECLINE.

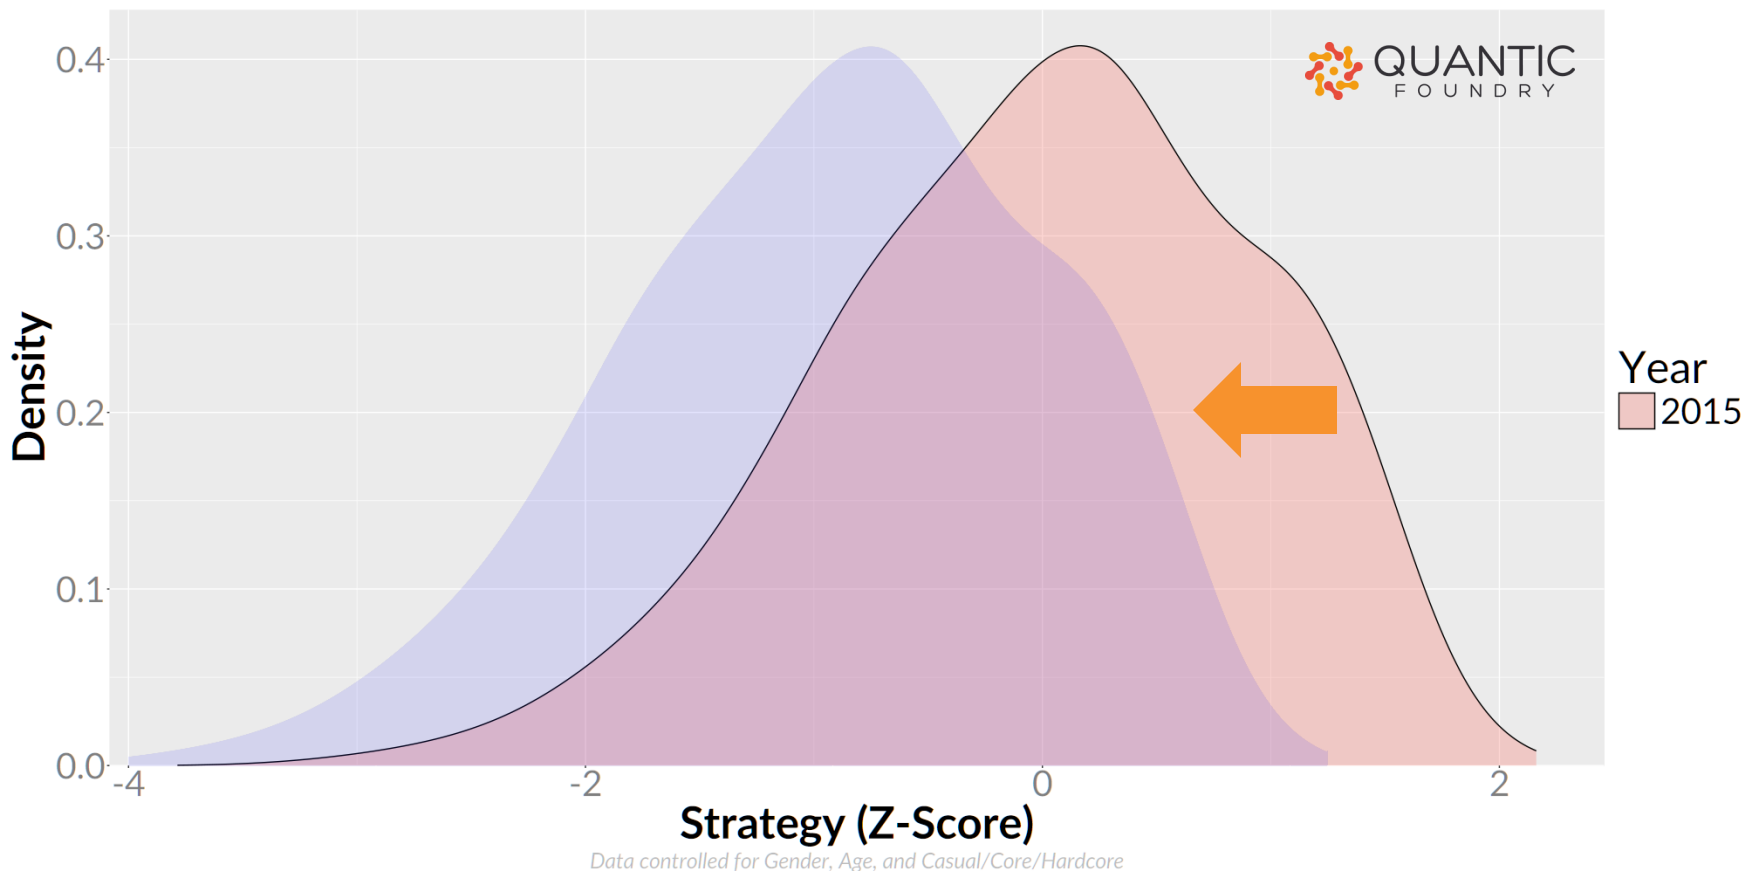

CAN WE DIFFERENTIATE IF EVERYONE IS CHANGING OR NEW COHORTS ARE CHANGING?

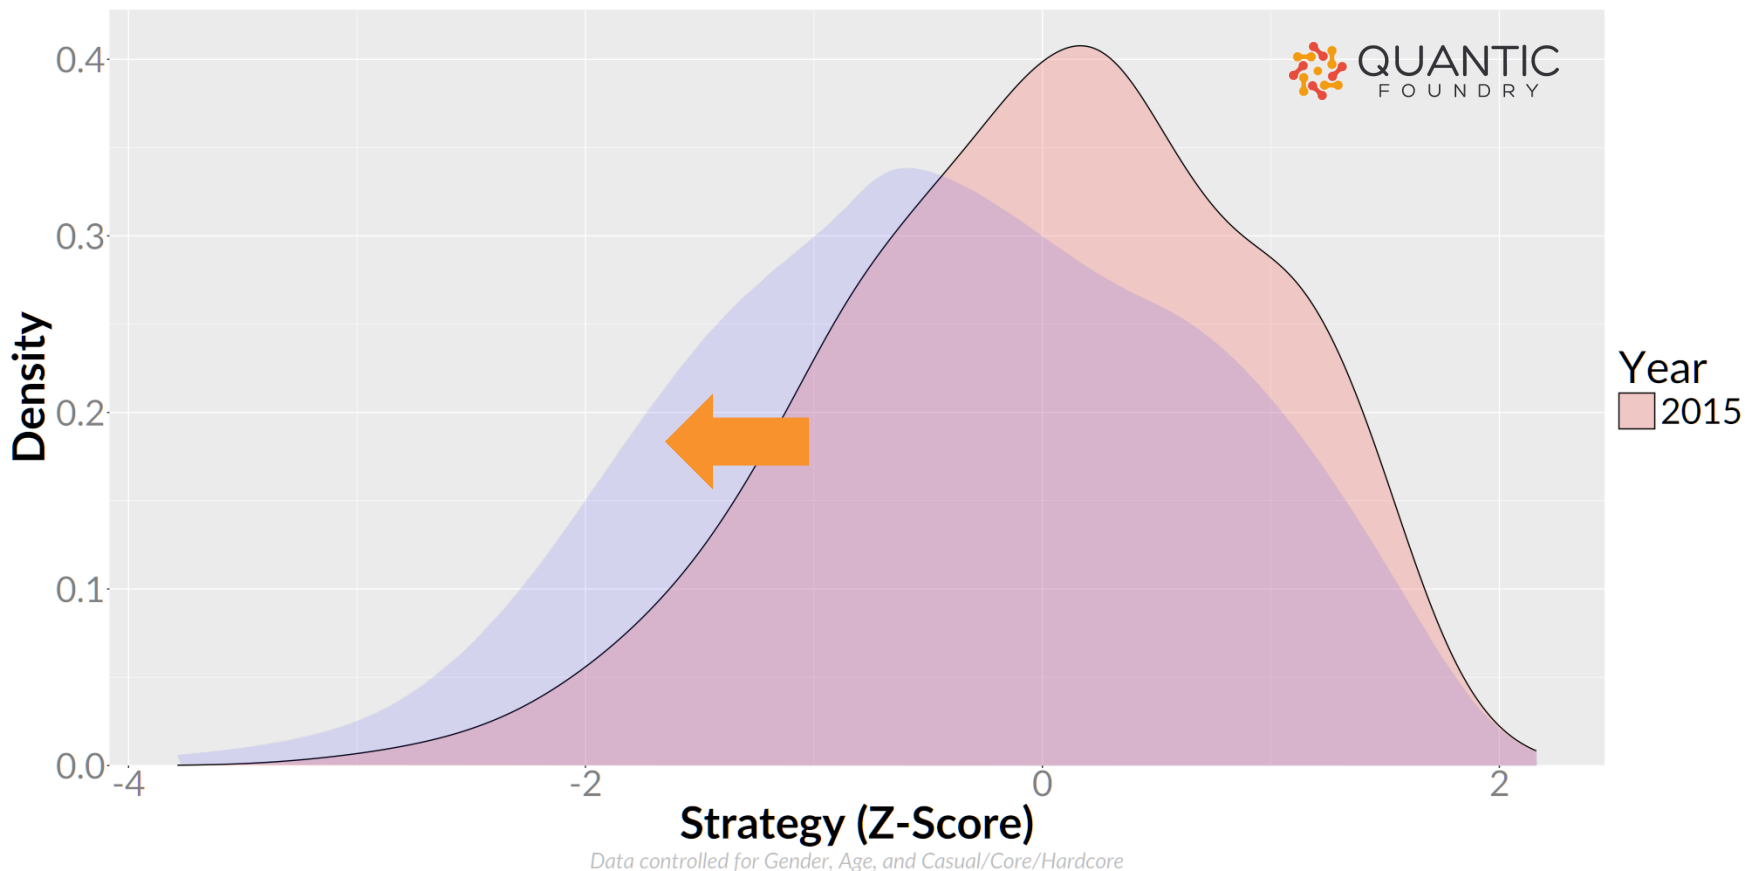

DENSITY IS THE SMOOTHED VERSION OF THE HISTOGRAM

SO DID EVERYONE CHANGE? AND THE ENTIRE DISTRIBUTION SHIFTED.

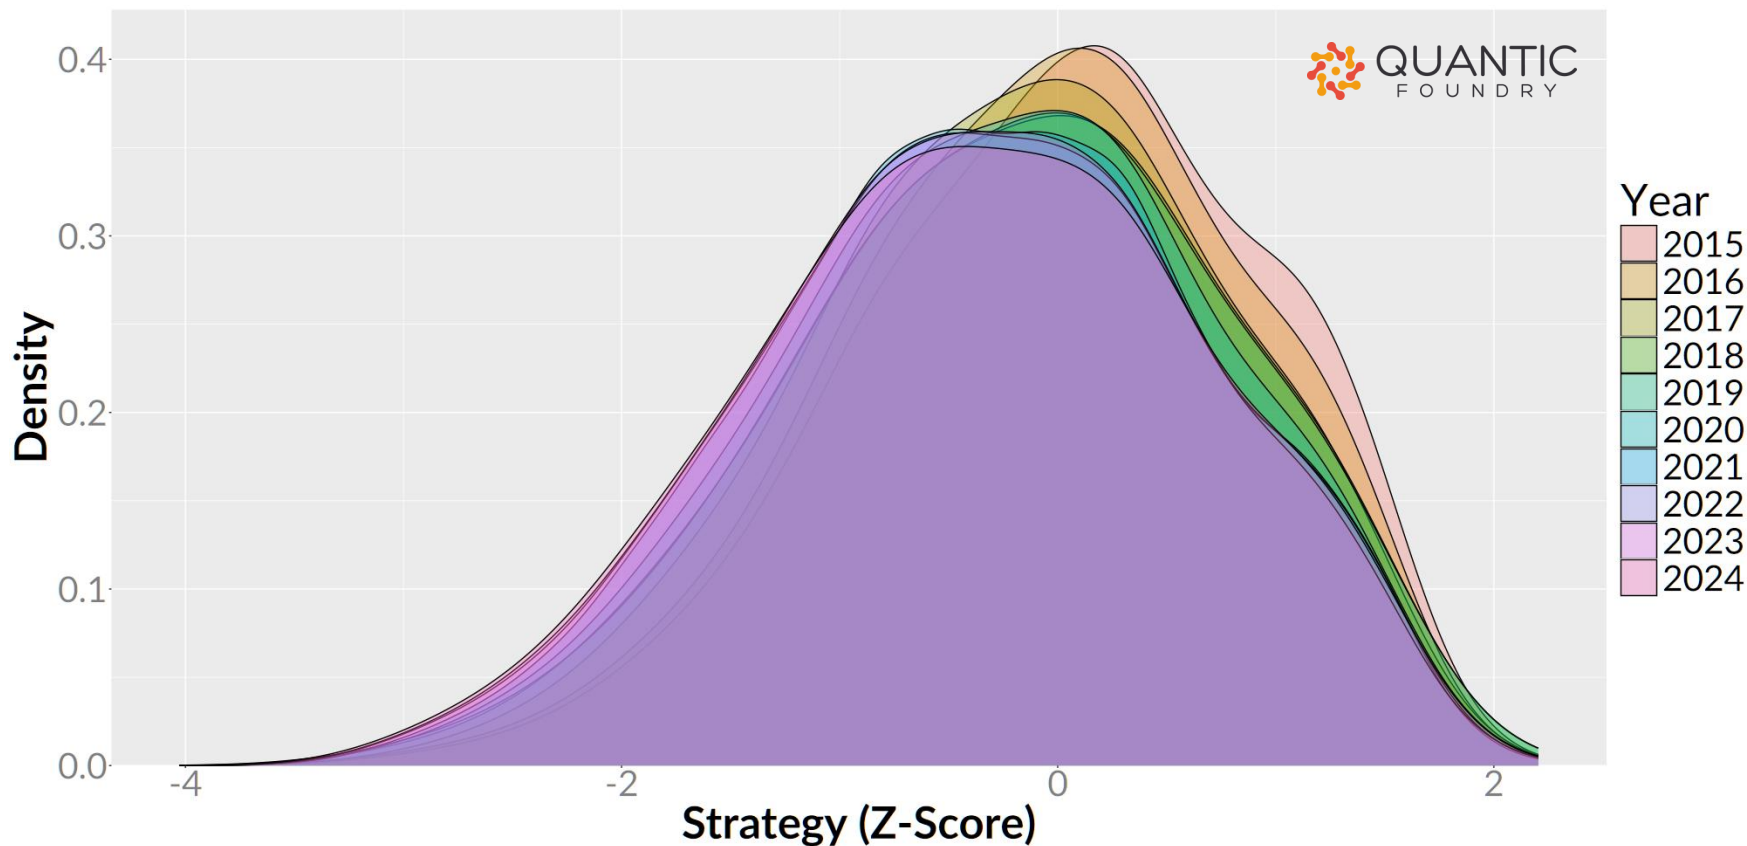

OR DID NEWER COHORTS COME IN MUCH LOWER? AND THE LEFT TAIL HAS GROWN LARGER.

NOT EVERYONE IS CHANGING.

NEW COHORTS ARE DRIVING THE DISTRIBUTION LOWER.

A white, rectangular carton with a white screw cap is positioned on a dark, reflective surface. The carton has a small, folded flap on its top left. The words "ORGANIC" and "DATA" are printed in bold, black, sans-serif capital letters on the front face. "ORGANIC" is in a smaller font size and is positioned above "DATA". The background is a plain, light-colored wall.
